

Coatbridge Native Forest Project

Forest type
Native

Emission Reductions
41,500 tCO_{2e} total stored
1,980 tCO_{2e} annual removals

Start date
1994

Project Type
Reforestation
368 hectares

Location
Marlborough

Standard
Permanent Forest
Sink Initiative
(PFSI)

Coatbridge is a family-owned property of 1,600 hectares located in Marlborough and farmed by the Adams family since 1851. The property undertakes a diversity of operations from forest regeneration, cattle and sheep farming, viticulture, and honey production. The owners have committed large parts of their land to forest regeneration by covenanting it under the [PFSI](#) to protect and promote natural forest recovery.

Income from carbon credit sales support the ecological development of the area, by diversifying the landowner income and putting value on retaining the forests. Carbon income helps with maintaining fire breaks, as well as pest and weed control. A wilding control program is also being funded to stop the spread of invasive pines within the protected areas.
