

Forest type
Native and introduced

Emission Reductions
6,100 tCO_{2e} total stored
500 tCO_{2e} annual removals

Start date
1993

Project Type
Reforestation
59 hectares

Location
Canterbury

Standard
Permanent Forest Sink Initiative (PFSI)

Fishermans Bay

Fishermans Bay is a family-owned farm known for its spectacular coastal setting and outstanding homestead gardens. The farm has dedicated 35% of its land to restoring forest. The owners have committed to long-term sustainable land management by covenanting their property under the [PFSI](#), the [QE II National Trust](#) and [Banks Peninsula Conservation Trust](#). This means the forest is now a permanently protected carbon sink.

The growth of the forest results in removal of atmospheric CO₂ while promoting the regeneration of native trees as well as planting introduced species.

The income from the sale of carbon credits directly contributes to support conservation activities, which includes the protection and management of the yellow-eyed penguin sanctuary, pest and weed control, reserve boundary fencing, and ensuring safe access by maintaining tracks. The owners also support scientific conservation work within the property undertaken by the Department of Conservation (DOC).
